**(54) Title:** POLYAMINE CONJUGATES WITH ACIDIC RETINOIDS AND PREPARATION THEREOF

**(57) Abstract:** Invented are novel polyamine conjugates which have been readily obtained using as key-step the condensation of linear, conformationally restricted, cyclic and branched polyamines or suitably protected derivatives with vitamin A derivatives. These compounds inhibit the ribozyme ribonuclease P (RNase P) and the production of interleukin-2 (IL-2) and interferon- $\gamma$  (INF- $\gamma$ ) by peripheral blood mononuclear cells *in vitro*.
